

WATERTRONICS®

ELECTRONICALLY CONTROLLED PUMPING SYSTEMS

Watertronics offers the finest in golf and landscape irrigation pumping systems with the most comprehensive controls software available. Every station is custom engineered and built to meet individual job requirements.

Our line of systems includes: Vertical Turbine (VT) and Horizontal Centrifugal (HC) stations, Super Sports Turf (SST), Landscape Sports Turf (LST), Commercial Landscape Turf (CLT) and Residential Landscape Turf (RLT) self-enclosed stations, the BlackMax Submersible Sled system and the Airtronics Aeration system.

Watertronics offers the latest in pump station controls, communications and maintenance software packages. Our Watervision® remote monitoring software combined with the Pumplink® software interface allows your pump station to communicate with the irrigation central computer in real time. Add the Maintenance Manager® software package and you have "total control" of your entire irrigation system from a remote location.

Together with a variety of custom built accessories such as HDPE piping, inlet screens, and full station enclosures, Watertronics can provide a total irrigation pumping system specifically designed to meet any customer specifications.

For water quality management, Watertronics manufactures a full range of fertigation injection systems (EZ Feed), and screen filters.

Call or visit our website for information on any or all of Watertronics irrigation pumping system products!
